### **REASON FOR ALLOWANCE**

1. Luscher et al, and Chen disclose a bicycle wheel rim, comprising an inner radial wall having a first through hole, an outer radial wall having a second through hole aligned with the first through hole; side walls connecting the inner and outer radial walls together, and a removable tubular element located through the first and second through holes, the removable tubular element further comprising a tubular body having first and second ends; an outwardly extending flange located on the first end which abuts the outer radial wall proximate to the second through hole; a valve connection compatible with a valve body for a bicycle tire; a removable locking mechanism adapted to engage the removable tubular element and to detachably secure the removable tubular member in position. Mercat discloses a bicycle wheel rim comprising a removable tubular member threadably attached to the inside of the wall of the rim including a spoke attachment threadably attached to the inside of the tubular member. Doring discloses a valve connection for wheels for tubeless bicycle tires comprising a metal sleeve which is presses fitted into the rim. However, none of the references of record suggests a bicycle wheel rim wherein when the removable tubular member is detached from the inner and outer radial walls, the rim can be used with an optional inner tube of the tire in the manner defined in the instant claims 21, 33, 41 and in combination with other limitations of the claims. Also none of the references of record suggests a bicycle wheel rim wherein a weld is used to retain the first end of the tubular body in the manner defined in the instant claim 49 and in combination with other limitations of the claim.

Therefore, claims 22-31, 34-40, 42-47, depending therefrom are considered to be allowable.
